

The dataset represents a small fictional organisation with employees' information. The challenges intentionally introduced include missing values in the "Age" and "Salary" columns, an empty value in the "Name" column, and an empty value in the "Department" column. The mini-project will address these challenges through data cleaning using pandas.

Let's go through the columns in the mini-project dataset:

1. **ID:** Unique identifier for each person.
2. **Name:** Name of the person.
3. **Age:** Age of the person (some missing values intentionally introduced).
4. **Gender:** Gender of the person.
5. **Salary:** Salary of the person (some missing values intentionally introduced).
6. **Department:** Department in which the person works.
